Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2 and 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mashiko et al for the reasons set forth in paper no.12 and 16.

Applicant argues that Mashikoo et al teach a heat sink assembly with a base plate with integrally molded fins and that applicant is claiming "separate heat dissipating pin members" Applicant further argues that "Thus, in Applicants method, a single mold containing integrated sections for the base plate and pins is not used and the resulting heat pipe construction is not a unitary , molded structure". However, applicant's claim merely calls for "to form a base plate and providing separate heat-dissipating pin members on the surface of the base plate." The pins of Mashikoo et al are separate from the base plate(separate only requires that they be a different part, which they are) as claimed by applicant. Applicant's claims are not reflected in the arguments. No other feature or dependent claim has been argued by applicant and therefore it is considered that all other issues in the claims are not contested by the applicant.
